TEST REPORT IEC 61683

Photovoltaic systems – Power conditioners – Procedure for measuring efficiency

Report Number:	ES200116062S			
Date of issue:	March 27, 2020			
Total number of pages	18 pages			
Name of Testing Laboratory preparing the Report	EMTEK (SHENZHEN) CO., LTD.			
Applicant's name:	ShenZhen Sunray Power Co., Ltd			
Address:	B16,Rd No.1,The First Industrial Zone, Bai Hua Dong, Guang Ming New District, Shen Zhen, China			
Test specification:				
Standard	IEC 61683:1999, EN 61683:2000			
Test procedure:	IEC/EN report			
Non-standard test method:	N/A			
Test Report Form No	IEC61683B			
Test Report Form(s) Originator:	TÜV SÜD Product Service GmbH			
Master TRF:	Dated 2017-11-03			
Copyright © 2017 IEC System of Conformity Assessment Schemes for Electrotechnical Equipment and Components (IECEE System). All rights reserved.				
This publication may be reproduced in whole or in part for non-commercial purposes as long as the IECEE is acknowledged as copyright owner and source of the material. IECEE takes no responsibility for and will not assume liability for damages resulting from the reader's interpretation of the reproduced material due to its placement and context.				
If this Test Report Form is used by non-IECEE members, the IECEE/IEC logo and the reference to the CB Scheme procedure shall be removed.				
	Report unless signed by an approved CB Testing Laboratory te issued by an NCB in accordance with IECEE 02.			
Conoral disalaimary				

General disclaimer:

The test results presented in this report relate only to the object tested.

This report shall not be reproduced, except in full, without the written approval of the Issuing CB Testing Laboratory. The authenticity of this Test Report and its contents can be verified by contacting the NCB, responsible for this Test Report.

INVERTER CHARGER

Model Name: PS 5KVA Color: Silver and Black Operating Temperature Range: 0~55°C

|

Inverter Mode: Rated Power: 5000VA/5000W DC Input: 48VDC, 104A AC Output: 230VAC,50Hz,22A, 1 ¢

AC Charger Mode:

AC Input: 230VAC, 50Hz, 36A, 1 ¢ DC Output: 54VDC, 10-60A

AC Output: 230VAC, 50Hz, 22A, 1 ¢ Solar Charger Mode:

Rated Current: 50A

System Voltage: 48VDC Min. Solar Voltage: 36VDC Max. Solar Voltage(VOC): 105VDC

INVERTER CHARGER

Model Name: PS PLUS 5KVA Operating Temperature Range: 0~55°C

_

Inverter Mode: Rated Power: 5000VA/ 5000 W DC Input: 48VDC, 104 A AC Output: 230VAC,50Hz,22A, 1 ¢ AC Charger Mode: AC Input: 230VAC, 50Hz, 36A, 1 ¢ DC Output: 54VDC, 10-60A AC Output: 230VAC, 50Hz, 22A, 1 ¢ Solar Charger Mode:

Rated Current: 50A System Voltage: 48VDC Min. Solar Voltage: 36VDC Max. Solar Voltage(VOC): 105VDC

Test item particulars	
Classification of installation and use:	Class I Class II Class III
Supply Connection	 □ pluggable equipment □ direct plug-in □ permanent connection □ for building-in
Possible test case verdicts:	
- test case does not apply to the test object::	N/A
- test object does meet the requirement:	P (Pass)
- test object does not meet the requirement:	F (Fail)
Testing:	
Date of receipt of test item:	February 20, 2020
Date (s) of performance of tests:	February 20, 2020 to February 24, 2020
General remarks:	
"(See Enclosure #)" refers to additional information ap "(See appended table)" refers to a table appended to the Throughout this report a a comma / point is us	ne report.
Manufacturer's Declaration per sub-clause 4.2.5 of	IECEE 02:
The application for obtaining a CB Test Certificate includes more than one factory location and a declaration from the Manufacturer stating that the sample(s) submitted for evaluation is (are) representative of the products from each factory has been provided:	 ☐ Yes ☑ Not applicable
When differences exist; they shall be identified in t	he General product information section.
Name and address of factory (ies):	Same as manufacturer
General product information:	
The unit is stand-alone inverter with non- sinewave o/	p, it can convert the DC voltage to AC voltage.
All models have the similar constructions, circuit diagr tests were performed on model MPS PLUS 5KVA whi	am and PCB layout. Unless otherwise stated, all
tests were performed on moder wir o'r 200 StorA win	ch means the typical model.

	IEC 61683:1999		
Clause	Requirement – Test	Measuring result – Remark	Verdict

4	Efficiency measurement conditions		Р
	Efficiency is measured under the conditions in the following clauses.		Р
	Specific conditions may be excluded by mutual agreement when those conditions are outside the manufacturer's allowable operating range.		Р
4.1	DC power source for testing		Р
	For power conditioners operating with fixed input voltage, the d.c. power source is a storage battery or constant voltage power source to maintain the input voltage.	DC power source used.	Р
	For power conditioners that employ maximum power point tracking (MPPT) and shunt-type power conditioners, either a photovoltaic array or a photovoltaic array simulator is utilized.		N/A
4.2	Temperature		Р
	All measurements are to be made at an ambient temperature of 25 °C \pm 2 °C.	(See appended table)	Р
	Other ambient temperatures may be allowed by mutual agreement. However, the temperature used must be clearly stated in all documentation.		Р
4.3	Output voltage and frequency		Р
	The output voltage and frequency are maintained at the manufacturer's stated nominal values.		Р
4.4	Input voltage		Р
	 Measurements performed in each of the following tests are repeated at three power conditioner input voltages: a) manufacturer's minimum rated input voltage; b) the inverter's nominal voltage or the average of its rated input range; c) 90 % of the inverter's maximum input voltage. 		N/A
	In the case where a power conditioner is to be connected with a battery at its input terminals, only the nominal or rated input voltage may be applied.		Р
4.5	Ripple and distortion		Р
	Record input voltage and current ripple for each measurement. Also record output voltage and current distortion (if a.c.) or ripple (if d.c.). Ensure that these measurements remain within the manufacturer's specified values.		P
4.6	Resistive loads/utility grid		Р

IEC 61683:1999			
Clause	Requirement – Test	Measuring result – Remark	Verdict

	At unity power factor, or at the intrinsic power factor of grid-connected inverters without power factor adjustment, measure the efficiency for power levels of 10 %, 25 %, 50 %, 75 %, 100 % and 120 % of the inverter's rating.		N/A
	Stand-alone inverters are also measured at a power level of 5 % of rated. The power conditioner test is conducted with a specified resistive and reactive grid impedance.	(See appended table)	Р
4.7	Reactive loads	The unit did not support inductive load	N/A
	For stand-alone inverters, measure the efficiency with a load which provides a power factor equal to the manufacturer's specified minimum level (or 0,25, whichever is greater) and at power levels of 25 %, 50 % and 100 % of rated VA.		N/A
	Repeat for power factors of 0,5 and 0,75 (do not go below the manufacturer's specified minimum PF) and power levels of 25 %, 50 %, and 100 % of rated VA.		N/A
4.8	Resistive plus non-linear loads		Р
	For stand-alone inverters, measure the efficiency with a fixed non-linear load (total harmonic distortion (THD) = (80 ± 5) %) equal to (25 ± 5) % of the inverter's rated VA plus sufficient resistive load in parallel to achieve a total load of 25 %, 50 % and 100 % of rated VA.		Р
	Repeat the measurements with a fixed non- linear load equivalent to (50 ± 5) % of the inverter's rated VA plus sufficient resistive load in parallel to achieve a total load of 50% and 100% of rated VA.		P
	The type of non-linear load must be clearly stated in all documentation.	RCD non-linear load used	Р
4.9	Complex loads	The unit did not support complex loads	N/A
	When a non-linear plus a sufficient reactive load condition is specified for stand-alone inverters, measure the efficiency with a fixed non-linear load (THD = (80 ± 5) %) equal to (50 ± 5) % of the inverter's rated VA plus a sufficient reactive load (PF = 0,5) in parallel to achieve a total load of 50 % and 100 % of rated VA.		N/A
	The type of complex load is clearly stated in all documentation.		N/A

IEC 61683:1999			
Clause	Requirement – Test	Measuring result – Remark	Verdict

5	Efficiency calculations		Р
5.1	Rated output efficiency	(See appended table)	Р
5.2	Partial output efficiency	(See appended table)	Р
5.3	Energy efficiency	(See appended table)	Р
5.4	Efficiency tolerances		Р

6	Conditions of loading for output ports	Р
6.1	Test circuit	Р
	Figure 1a is applied to standard-alone power conditioners	Р
	+ + <td>Р</td>	Р
	Figure 1b is applied to utility-interactive power conditioners	N/A
	PS V1 PC V2 PF Utility Figure 1b – Utility-interactive type F F V2 V2 V2 Figure 1b – Utility-interactive type F F V2 V2	N/A
